

From strain to gain

Vitamin Management

Feed Cost Optimization

Environmental Management

Sustainable Production

Identifying the challenge

In aquaculture, the right nutrition makes all the difference. Aquafeed can account for up to 70% of total production costs, and 80% of the environmental footprint. Our full range of aquaculture solutions and services improve water quality, maximize productivity, and optimize feed cost, reducing overall financial strain. Ready to feed your way to performance gains and healthy profits?

Tackling your performance challenges together

With unique solutions and specific expertise and services, we can help you to:

- Deliver nutritional requirements, from hatchery until harvest
- Optimize feed cost, whilst diversifying the raw material basket
- Improve water and sediment quality to maximize productivity and alleviate 'Pond Aging'
- Define and implement sustainability measures to improve your environmental footprint
