 Immune support

 Pathogen control

 Mycotoxin Risk Management

 Sustainable aquaculture

Identifying the challenge

In aquaculture, fish and shrimp are constantly exposed to pathogen pressures, environmental fluctuations and other production stressors, which negatively impacts survival and productivity. dsm-firmenich offers solutions to protect aquatic animals, reducing the risk of health and welfare challenges throughout their production life.

Tackling your health and welfare challenges, together

With unique solutions and specific expertise, we can help you to:

- Improve survival, boosting productivity and profitability whilst tackling antimicrobial resistance
- Reduce the risk of disease, for a more consistent and predictable harvest
- Mitigate against feed contaminants which can be predisposing factors for disease, for improved lifetime performance
- Define and implement sustainability measures to improve your environmental footprint
